

A Placebo-Controlled Study of Oral Ozanimod as Maintenance Therapy for Moderately to Severely Active Crohn's Disease

CLINICALTRIALS.GOV IDENTIFIER
NCT03464097

RECRUITMENT STATUS
RECRUITING

FIRST POSTED
MARCH 13, 2018

LAST UPDATE POSTED
JULY 4, 2022

STUDY DESCRIPTION

Brief Summary

This is a study to demonstrate the effect of oral ozanimod as maintenance therapy in participants with moderately to severely active Crohn's Disease.

Condition or Disease: Crohn Disease

Intervention/treatment: Drug: Ozanimod
Other: Placebo

Phase: Phase 3

DETAILED DESCRIPTION

N/A

STUDY DESIGN

Study Type:	Interventional	Actual Study Start Date:	June 2018
Estimated Enrollment :	485 participants	Estimated Primary Completion Date:	June 2024
Intervention Model :	Parallel Assignment	Estimated Study Completion Date:	September 2024
Masking:	Quadruple (Participant, Care Provider, Investigator, Outcomes Assessor)		
Primary Purpose:	Treatment		
Official Title:	A Placebo-Controlled Study of Oral Ozanimod as Maintenance Therapy for Moderately to Severely Active Crohn's Disease		

ARMS AND INTERVENTIONS

Arm	Intervention/treatment
Experimental: Ozanimod	Drug: Ozanimod Specified dose on specified days
Placebo Comparator: Placebo	Other: Placebo Specified dose on specified days

OUTCOME MEASURES

- Primary Outcome Measures: 1. Proportion of participants with a Crohn's Disease Activity Index (CDAI) score of < 150 [Time Frame: Week 52]
The Crohn's Disease Activity Index (CDAI) is a composite score that is used to measure the clinical activity of CD
2. Proportion of participants with a Simple Endoscopic Score for Crohn's Disease (SES-CD) score decrease from baseline of $\geq 50\%$ [Time Frame: Week 52]
- Secondary Outcome Measures: 1. Proportion of participants with CDAI reduction from baseline of ≥ 100 points or CDAI score of < 150 [Time Frame: Week 52]
2. Proportion of participants with average daily abdominal pain score ≤ 1 point and average daily stool frequency ≤ 3 points with abdominal pain and stool frequency no worse than baseline [Time Frame: Week 52]
 3. Proportion of participants with a CDAI score < 150 at Week 52, while remaining corticosteroid-free in the prior 12 weeks [Time Frame: Week 52]
 4. Proportion of participants with a CDAI score of < 150 in participants with a CDAI score < 150 at pre-randomization [Time Frame: Week 52]
 5. Proportion of participants with a CDAI score of < 150 at Week 52 and at $\geq 80\%$ of visits between Week 8 and Week 52, inclusive, in participants with a CDAI score < 150 at pre-randomization [Time Frame: Week 52]
 6. Proportion of participants with absence of ulcers ≥ 0.5 cm with no segment with any ulcerated surface $\geq 10\%$ at Week 52 [Time Frame: Week 52]
 7. Histologic improvement based on differences between ozanimod and placebo in histologic disease activity scores (ie, Global Histologic Disease Activity Score [GHAS] changes) [Time Frame: Week 52]
 8. Proportion of participants with average daily abdominal pain score ≤ 1 point, with average daily stool frequency score ≤ 3 points with abdominal pain and stool frequency no worse than baseline and an SES-CD decrease from baseline of $\geq 50\%$ [Time Frame: Week 52]
 9. Proportion of participants with CDAI score of < 150 and SES-CD decrease from baseline of $\geq 50\%$ [Time Frame: Week 52]
 10. Proportion of participants with average daily abdominal pain score ≤ 1 point, with average daily stool frequency score ≤ 3 points with abdominal pain and stool frequency no worse than baseline and an SES-CD ≤ 4 points and a SES-CD decrease ≥ 2 points [Time Frame: Week 52]
 11. Proportion of participants with CDAI reduction from baseline of ≥ 100 points or CDAI score < 150 with SES-CD decrease from baseline of $\geq 50\%$ [Time Frame: Week 52]

12. Proportion of participants with CDAI score < 150 at Week 12 and SES-CD decrease from baseline of ≥50% [Time Frame: Week 52]
13. Proportion of participants with CDAI reduction from baseline of ≥ 70 points [Time Frame: Week 52]
14. Proportion of participants with mucosal healing (SES-CD ≤ 4 points and a SES-CD decrease ≥ 2 points) with histologic improvement by GHAS or Robarts Histologic Index [Time Frame: Week 52]
15. Time to relapse and exclusion of other causes of an increase in disease activity unrelated tounderlying CD (eg, infections, change in medication) [Time Frame: Week 52]
16. Proportion of participants with a Crohn's Disease Endoscopic Index of Severity (CDEIS) decrease from baseline of ≥ 50% [Time Frame: Week 52]

ELIGIBILITY CRITERIA

Ages Eligible for Study: 18 to 75 Years (Adult, Older Adult)

Sexes Eligible for Study: All

Accepts Healthy Volunteers: No

Criteria

For more information regarding Bristol-Myers Squibb Clinical Trial participation, please visit: www.BMSStudyConnect.com

Inclusion Criteria:

Fulfilled the inclusion criteria at time of entry into the induction study and completed the week 12 efficacy assessments of the induction study In clinical response and/or clinical remission and/or an average daily stool frequency score ≤ 3 and an average abdominal pain score ≤ 1 with abdominal pain and stool frequency no worse than baseline at Week 12 of the Induction Study

Exclusion Criteria:

Partial or total colectomy, small bowel resection, or an ostomy since day 1 of the induction studies or has developed a symptomatic fistula Had a rectal steroid therapy, rectal 5-aminosalicylates, parenteral corticosteroids, immunomodulatory agents, investigational agents or apheresis
Other protocol-defined inclusion/exclusion criteria apply

CONTACTS AND LOCATIONS

Contacts

Contact: Recruiting sites have contact information. Please contact the sites directly. If there is no contact information, please email: Clinical.Trials@bms.com

Contact: First line of the email MUST contain the NCT# and Site #.
